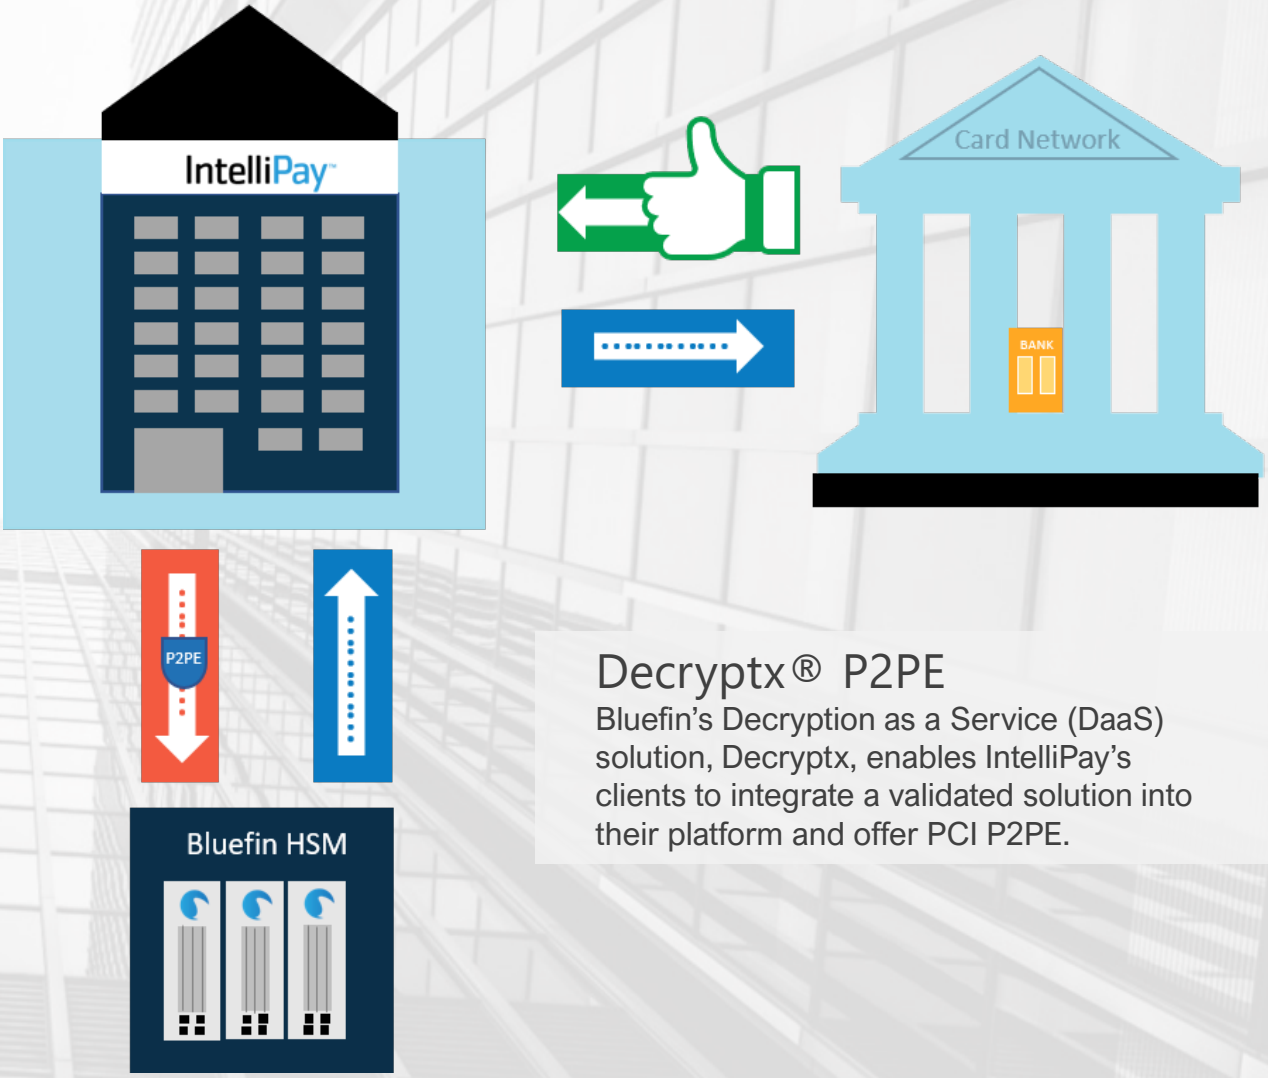
Point-to-Point Encryption

IntelliPay has partnered with Bluefin, a leading payment security solution provider, to provide the PCI scope reduction and security of PCI-validated point-to-point encryption (P2PE) solution.



Decryptx® P2PE

Bluefin's Decryption as a Service (DaaS) solution, Decryptx, enables IntelliPay's clients to integrate a validated solution into their platform and offer PCI P2PE.

With Decryptx, the only part of the transaction that Bluefin requires is the P2PE payload, which contains the swiped, keyed or EMV card data encrypted within the PCI-validated device. Bluefin decrypts the cipher text within our secure HSM environment and sends the PAN and track data back over an encrypted connection.

Give us a call today to discuss your card and ACH payment acceptance options, goals & requirements or to schedule a product demonstration.
