

Introducing the IntelliPay Lightbox Terminals

The Lightbox Terminals are pop-up modals that present your application's look and feel while allowing the customer to enter or process their payment info into IntelliPay's PCI Compliant, highly secure payment platform.

There are three lightbox terminal types:

- Card Present - EMV terminal for in-person transactions
- Card Not Present - for online transactions
- Store Mode - for registering cards/bank accounts without processing a payment

By offering Card Present (EMV), Card Not Present, and Store Mode terminals, your application can accept all types of payments with the confidence of receiving the appropriate interchange fees, chargeback protection, and PAN (Personal Account Numbers) encryption.

The screenshot shows a web application background with a dark blue header and a light gray sidebar. A white modal window is centered on the screen. The modal has a close button (X) in the top right corner. Inside the modal, there is a logo placeholder "YOUR LOGO HERE" with a target icon. Below the logo, there are two main sections: "Payment Info" and "Account #". The "Payment Info" section has a "Credit Card" button (highlighted in green) and an "Ach / E-Check" button. Below these, there are input fields for "Name on card" (containing "Joshua Tester"), "Card number" (with a Visa logo), "MM" (month), "YY" (year), "CVV" (with a Visa logo), and "Billing Zip". The "Account #" section has a text input field containing "test123". Below the "Payment Info" section, there is a "Amount to Pay" section with a large input field showing "\$ 84.14". Below the "Amount to Pay" section, there is a checkbox labeled "I'm not a robot" and a reCAPTCHA logo. At the bottom of the modal, there is a "PAY" button. Below the modal, there are links for "Privacy Policy" and "Powered by IntelliPay". At the very bottom of the modal, there are logos for "VERIFIED BY" and "SECURED" with a padlock icon.

Key Features

- Customized modal appearance
- EMV, swipe & online payment options
- Accept credit & debit cards and eChecks (ACH)
- API / Plug-n-Play integration
- Centralized, real-time reporting for all payments
- Fully hosted, reduces PCI audit scope

Our SaaS based, PCI DSS Level 1 compliant, cloud-based payment suite is extremely secure, and fully scalable to grow alongside your business.
