# IntelliPay™

Credit Card Terminals

How It Works

We support Verifone's Engage line of terminals for ease of use and scalability. From single to multiple locations, terminal "nicknames" make tracking location activity easy. Processing on our secure PCI network takes payments out of PCI audit scope. Voids and refunds can be handled at the terminal or with other terminal management/reporting functions in our cloud-based payment suite.

Why IntelliPay and Engage Terminals?

- Integrated and encrypted with the IntelliPay suite
- Remote cloud-based terminal management
- Ideal for multiple location environments
- Remote updates

QUICK FACTS

Dip, Swipe, and EMV compatible

Cloud-based console management

Remote updates

Supports single dip EMV transactions

USE CASE

Enterprises requiring in-person (card-present) and remote multiple location management and control.
