

Customer Portal

How It Works

The customer portal lets users view and pay single or multiple bills using a shopping cart-like interface on any website. Users can access the portal from any device to pay as a guest or register to set up auto-pay, use a digital wallet, and view payment history. Robust reporting through our payment suite or via API in your host application makes managing payments painless.

Why the Customer Portal?

- Quickly add payments to any page or application
- Customizable and brandable
- Available in standalone or integrated versions
- Centralized, real-time reporting for all payments
- Fully hosted for reduced PCI audit scope
- Documentation for easy integration

QUICK FACTS

Customer portal's familiar cart interface supports multiple bill payments and digital wallets

Connects to host applications through API or SFTP import/export

Fully hosted solution

USE CASE

Existing website needs a full-service invoice presentment and checkout option that accepts one-time, account based and recurring payments.
