IntelliPay™

Lightbox - EMV

How It Works

Lightbox EMV includes all Lightbox Online features, plus a connection to an Augusta Smart Card Reader, enabling the integrated host application to accept and process EMV transactions. Sample code makes Lightbox EMV quick to implement.

Why Lightbox?

- Robust tool with many configurable features
- Quickly add EMV card-present payments to any page or app

- Customizable and brandable
- Centralized, real-time reporting for all payments
- Sample code and documentation for easy integration

QUICK FACTS

Lightbox –EMV is a payment form that floats over existing website or software content

Connects to integrated Augusta reader to accept EMV payments

Works with third-party apps

USE CASE

Anyone looking to quickly and securely add EMV payments to any web page or application without the headaches of PCI and other certifications.
