IntelliPay™

Lightbox - Store Only Mode

How It Works

Lightbox - Store Only Mode's simple credit card-like interface makes it easy to edit or add payment data (without making a payment) and schedule future payments. Lightbox autopay uses secure tokens to automate future/pre-dated payment processing and protect sensitive data.sensitive data.

Why Lightbox - Store Only Mode?

- Add payment information for customers easily
- Secure tokens returned for future data payments
- Add or edit payment methods without making a payment

- Report all payments in centralized, real-time
- Provide sample code and documentation for easy integration

QUICK FACTS

Lightbox - Store Only Mode is a payment form that floats over existing web pages or applications

Enables customers to register a payment method (card or ACH)

Provides a token you can store for future payments

USE CASE

Organizations that need a way to enroll customers in a program or for an event with future or pre-dated payments.

Companies that need a way for customers to add or update payment information without processing a transaction.
